Sultan Shah

Backend & Database Engineering

We sincerely thank you for the opportunity to architect and build the digital infrastructure for IOCA. This platform is a custom-engineered, fully bilingual enterprise web application built for high scalability, dynamic content management, and premium user experience. This document serves as a formal receipt confirming that all technical milestones have been delivered and payment has been received in full.

PROJECT DELIVERABLES & ARCHITECTURE

1. Brand Identity, UI/UX & Frontend Architecture

MASHOOD YAR KHAN

- Complete Brand Architecture:** Sole responsibility for establishing the visual language, brand direction, and a comprehensive Brand Identity Kit, including custom logo design and strict brand guidelines.
- Premium UI/UX Implementation:** End-to-end user interface and user experience design tailored specifically for the NGO sector, alongside extensive sourcing and optimization of next-gen WebP graphical assets.
- Enterprise Frontend Stack:** Completely engineered the React.js application using Vite for optimal build times, strictly typed with TypeScript for codebase reliability.
- Bilingual System & Dynamic Components:** Built the complex state management for seamless, live UI switching between English and Urdu (RTL) without page reloads. Implemented Tailwind CSS and Framer Motion for responsive layouts, split-screen modals, and masonry gallery grids.

2. Backend Infrastructure & Custom CMS

SULTAN SHAH

- **Database Architecture:** Engineered a scalable backend infrastructure using PostgreSQL (Supabase) via a fully decoupled REST API service layer.
- **Security & Authentication:** Implemented robust JWT authentication and secure Row Level Security (RLS) policies protecting all data endpoints.
- **Custom Content Management System (CMS):** Built dynamic upload flows utilizing cloud storage buckets for Gallery media and Impact Stories.
- **Global Asset Management:** Created a highly specialized key-value database architecture allowing the client to hot-swap hero images, covers, and global application assets directly from an admin dashboard without code intervention.
- **Secure Communications:** Designed and implemented secure email forwarding server logic for dynamic contact and inquiry forms.
