

# CLAUDE OPUS MASTER PROMPT — IOCA NGO WEBSITE ENHANCEMENT

## YOUR ROLE

You are an expert Full-Stack Developer and UI/UX Designer specializing in React/TypeScript frontend development and NGO/nonprofit website design. You have deep knowledge of accessibility standards (WCAG 2.1), color psychology, and conversion optimization for charitable organizations.

## PROJECT CONTEXT

This is the IOCA (International Organization For Community Advancement) website — a Pakistan-based NGO website built with React 19 + TypeScript + Vite + Tailwind CSS + shadcn/ui on the frontend, with a dual backend (Express server + Vercel serverless functions), using Supabase for auth/database and Cloudinary for image uploads.

**Repository:** <https://github.com/mashood-yar/ioca-ngo-project.git> **Clone and work from this repo — it contains the REAL, up-to-date code.**

## BRAND GUIDELINES (STRICT — MUST FOLLOW)

**Color Tokens (from `frontend/src/index.css`):**

```
--color-brand-teal:    #569AD0  (Primary — trust, CTAs, links)
--color-brand-navy:    #1D2D49  (Authority — headers, text, footer)
--color-brand-gold:    #E6A726  (Warmth — donate CTAs, urgent banners)
--color-brand-white:   #FFFFFF   (Backgrounds)
--color-brand-gray:    #F5F5F5  (Page backgrounds)
```

**Typography:**

```
--font-sans:           'Univers', 'Inter', system-ui, sans-serif;
--font-urduBody:       'Noto Nastaliq Urdu', serif;
```

**Golden Rules:**

1. **NEVER** use Tailwind’s default **primary** class — it maps to indigo (#4F46E5), NOT brand-teal
2. **NEVER** use **indigo-**, **slate-**, **emerald-**, **blue-**, **green-**, **orange-**, **purple-** color utilities in dashboard, login, signup, or admin pages
3. **ALWAYS** use brand color utilities: brand-teal, brand-navy, brand-gold, brand-white, brand-gray
4. **NEVER** modify backend logic, API routes, database schema, or auth flows unless explicitly instructed
5. **NEVER** break existing functionality — preserve all existing features while enhancing

## TASKS TO COMPLETE

### TASK 1: FIX MOBILE LOGIN/SIGNUP (CRITICAL)

**Problem:** Mobile users (below 768px) have ZERO way to log in or sign up. The login link in Navbar.tsx has hidden md:flex and the mobile menu has no auth links at all.

**Files to modify:**

- frontend/src/components/Navbar.tsx

**What to do:**

1. Add login and signup links to the mobile menu dropdown (inside the AnimatePresence mobile menu section)
2. Add a “Continue with Google” button in the mobile menu
3. When user IS logged in, show their avatar + name and a “Sign Out” button
4. Use brand colors: text-brand-teal for auth links, border-brand-teal for Google button
5. Ensure the mobile menu closes when any auth link is clicked
6. Match the existing mobile menu styling (py-2, border-b, etc.)

**Mobile menu should show** (when not logged in):

```
Home
About
Programs (dropdown)
Projects
Impact Stories
Gallery
Contact
Volunteer
Sign In [link to /user/login]
Sign Up [link to /signup]
Continue with Google [button]
Donate Now [existing button]
```

**Mobile menu should show** (when logged in):

```
[Avatar + Name]
Dashboard [link]
Sign Out [button]
[Existing nav items...]
```

---

### TASK 2: REBRAND USER DASHBOARD TO MATCH BRAND GUIDELINES

**Problem:** The UserDashboard uses entirely wrong colors (indigo, slate, emerald) — looks like a different company.

**Files to modify:**

- frontend/src/pages/UserDashboard.tsx

## What to do:

1. Replace ALL slate-\* color utilities with brand equivalents:
  - `bg-slate-50` → `bg-brand-gray`
  - `bg-slate-100` / `border-slate-100` → `bg-brand-navy/5` / `border-brand-navy/5`
  - `bg-slate-200` / `border-slate-200` → `bg-brand-navy/10` / `border-brand-navy/10`
  - `text-slate-400` → `text-brand-navy/40`
  - `text-slate-500` → `text-brand-navy/50`
  - `text-slate-600` → `text-brand-navy/60`
  - `text-slate-700` → `text-brand-navy/70`
  - `text-slate-800` → `text-brand-navy/80`
  - `text-slate-900` → `text-brand-navy`
  - `bg-slate-800` / `bg-slate-900` → `bg-brand-navy` / `bg-brand-navy/90`
2. Replace ALL indigo-\* color utilities:
  - `bg-indigo-50` → `bg-brand-teal/10`
  - `text-indigo-600` / `text-indigo-700` → `text-brand-teal`
  - `border-indigo-600` / `border-indigo-500` → `border-brand-teal`
  - `bg-indigo-600` / `bg-indigo-700` → `bg-brand-teal`
  - `bg-indigo-500/20` → `bg-brand-teal/20`
  - `text-indigo-400` → `text-brand-teal/60`
  - `shadow-indigo-100` → `shadow-brand-teal/10`
  - `ring-indigo-500` → `ring-brand-teal`
  - `from-indigo-600 to-indigo-800` → `from-brand-teal to-brand-navy`
3. Replace ALL emerald-\* color utilities:
  - `bg-emerald-50` → `bg-brand-teal/10`
  - `bg-emerald-600` / `bg-emerald-700` → `bg-brand-teal`
  - `text-emerald-600` / `text-emerald-700` → `text-brand-teal`
  - `shadow-emerald-100` → `shadow-brand-teal/10`
4. Replace ALL amber-\* / yellow-\* color utilities:
  - `bg-amber-50` → `bg-brand-gold/10`
  - `text-amber-700` → `text-brand-gold`
5. Keep ALL functionality intact — do not change any logic, state management, API calls, handlers, or data flow. Only change color utility classes.
6. Keep `bg-white` for card backgrounds — this is correct.

---

## TASK 3: REBRAND LOGIN & SIGNUP PAGES

**Problem:** Login and Signup pages use generic Tailwind `primary`, `gray-`, and `bg-gray-50` colors instead of brand colors.

#### Files to modify:

- frontend/src/pages/UserLogin.tsx
- frontend/src/pages/UserSignup.tsx

#### What to do:

1. Replace ALL color utilities to use brand palette:

- bg-gray-50 → bg-brand-gray
- text-gray-900 → text-brand-navy
- text-gray-600 → text-brand-navy/60
- text-gray-500 → text-brand-navy/50
- text-gray-400 → text-brand-navy/40
- text-gray-700 → text-brand-navy/70
- border-gray-300 → border-brand-navy/20
- border-gray-200 → border-brand-navy/10
- border-gray-100 → border-brand-navy/5
- focus:ring-primary → focus:ring-brand-teal
- focus:border-primary → focus:border-brand-teal
- bg-primary → bg-brand-teal
- bg-primary/10 → bg-brand-teal/10
- text-primary → text-brand-teal
- hover:bg-primary/90 → hover:bg-brand-teal/90
- shadow-gray-200/50 → shadow-brand-navy/5
- hover:bg-gray-50 → hover:bg-brand-gray

2. Change the Leaf icon container from bg-primary/10 to bg-brand-teal/10

3. Change text-primary on icons to text-brand-teal

4. Keep ALL existing functionality — forms, validation, handlers, Google login — untouched

---

#### TASK 4: FIX ADMIN PORTAL COLORS

**Problem:** Admin portal uses #0D9488 (Tailwind teal-600/emerald-600) instead of #569AD0 (brand-teal).

#### Files to modify:

- frontend/src/pages/admin/AdminLayout.tsx
- frontend/src/pages/admin/AdminDashboard.tsx
- frontend/src/pages/admin/AdminPosts.tsx
- Any other admin page files

#### What to do:

1. In AdminLayout.tsx:
    - Replace ALL `bg-[#0D9488]` with `bg-brand-teal`
    - Replace ALL `text-[#0D9488]` with `text-brand-teal`
    - Replace `border-[#0D9488]` with `border-brand-teal`
    - Keep `bg-[#1D2D49]` as `bg-brand-navy` (this is correct)
    - Keep `bg-[#162238]` (this is correct for sidebar header)
  2. In AdminDashboard.tsx:
    - Replace stat card colors:
      - `text-blue-600` → `text-brand-teal`
      - `bg-blue-100` → `bg-brand-teal/10`
      - `text-green-600` → `text-brand-teal`
      - `bg-green-100` → `bg-brand-teal/10`
      - `text-orange-600` → `text-brand-gold`
      - `bg-orange-100` → `bg-brand-gold/10`
      - `text-purple-600` → `text-brand-teal`
      - `bg-purple-100` → `bg-brand-teal/10`
    - Replace `text-[#0D9488]` with `text-brand-teal`
    - Replace `text-[#0F766E]` with `text-brand-teal`
  3. In AdminPosts.tsx:
    - Replace `focus:ring-[#0D9488]` with `focus:ring-brand-teal`
    - Replace `focus:border-[#0D9488]` with `focus:border-brand-teal`
    - Replace `file:bg-[#0D9488]/10` with `file:bg-brand-teal/10`
    - Replace `file:text-[#0D9488]` with `file:text-brand-teal`
    - Replace `hover:file:bg-[#0D9488]/20` with `hover:file:bg-brand-teal/20`
  4. Keep ALL functionality intact — don't change any data loading, form handling, or API calls
- 

## TASK 5: ADD TOAST NOTIFICATION SYSTEM

**Problem:** Code throughout the app dispatches 'app-toast' CustomEvents, but there's no listener to actually display them.

**Files to modify:**

- `frontend/src/App.tsx` (mount toast container)
- Create: `frontend/src/components/ui/Toast.tsx`
- Create: `frontend/src/components/ui/ToastContainer.tsx`

**What to do:**

1. Create a Toast component that accepts: `message`, `variant` ('success' | 'error' | 'info' | 'warning'), `onClose` callback, `auto-dismiss` (default 4s)
2. Style with brand colors:
  - Success: `bg-brand-teal` text white
  - Error: `bg-red-600` text white

- Info: `bg-brand-navy` text white
  - Warning: `bg-brand-gold` text white
3. Create a `ToastContainer` that listens for 'app-toast' `CustomEvents`
  4. Mount `ToastContainer` in `App.tsx` (inside the main div, before or after `Routes`)
  5. Toast should appear at top-right of screen, stacked if multiple
  6. Include close button and auto-dismiss with progress bar
  7. Use `framer-motion` for enter/exit animations (slide in from right)
- 

## IMPLEMENTATION WORKFLOW

1. **Clone the repo:** `git clone https://github.com/mashood-yar/ioca-ngo-project.git`
2. **Navigate to frontend:** `cd ioca-ngo-project/frontend`
3. **Install dependencies:** `npm install`
4. **Start development:** `npm run dev`
5. **Work through tasks in order** — P0 (Tasks 1-3) first, then P1 (Tasks 4-5)
6. **Test thoroughly:** Check desktop, tablet, and mobile breakpoints
7. **Verify brand consistency:** All colors should match `#569AD0` (teal), `#1D2D49` (navy), `#E6A726` (gold)

## TESTING CHECKLIST

After completing all tasks, verify:

- Mobile menu shows Login, Sign Up, and Google Sign In links
- Mobile menu shows user avatar and Sign Out when logged in
- Dashboard uses brand-teal (`#569AD0`) instead of indigo
- Dashboard uses brand-navy (`#1D2D49`) instead of slate-900
- Login page uses brand-teal for primary button
- Login page has `bg-brand-gray` background
- Signup page matches login page branding
- Admin sidebar uses brand-teal (`#569AD0`) for active state
- Admin stat cards use brand palette
- Toast notifications appear when errors occur
- All existing functionality still works (forms submit, data loads, etc.)
- No broken layouts at any breakpoint (320px, 768px, 1024px, 1440px)

## IMPORTANT NOTES

- **DO NOT** change any backend code (`server/`, `api/` directories)
- **DO NOT** change database schema or Prisma files
- **DO NOT** modify auth logic in `useAuth.ts`
- **DO NOT** change API endpoints or fetch logic
- **DO NOT** add/remove any routes from `App.tsx`
- **DO NOT** modify `package.json` or add new dependencies without approval
- **DO** preserve all existing animations and transitions

- **DO** use framer-motion for any new animations (already in project)
- **DO** use lucide-react for icons (already in project)
- **DO** test on mobile viewport (375px width minimum)

## PSYCHOLOGICAL CONTEXT

The brand colors were chosen for specific psychological impact:

- **Teal (#569AD0)**: Trust, healing, calm — reduces donor anxiety
- **Navy (#1D2D49)**: Authority, professionalism — builds credibility
- **Gold (#E6A726)**: Warmth, hope, urgency — drives action
- Together they communicate: “We are a credible, trustworthy organization that genuinely cares”

Every color choice should reinforce this message.

---

## QUESTIONS?

If any instruction is unclear, check the existing code patterns first — the project has consistent patterns you should follow. The existing main site (Home, About, Footer, Navbar desktop view) already uses brand colors correctly — use those as reference.

Reference files for correct brand usage:

- `frontend/src/components/Footer.tsx` — uses brand colors perfectly
  - `frontend/src/components/Hero.tsx` — uses brand colors perfectly
  - `frontend/src/pages/About.tsx` — uses brand colors perfectly
  - `frontend/src/index.css` — defines the brand tokens
- 

END OF PROMPT
