

Humara Pakistan – Bilingual Brand Guidelines

[!NOTE] This document serves as the official visual identity guide for the Humara Pakistan platform. To generate a PDF from this file, simply right-click in your markdown viewer and select **Print -> Save as PDF**.

1. Brand Logos

Our logo is the visual cornerstone of Humara Pakistan. It must be treated with respect, given adequate breathing room, and only used in approved color variations.

Primary Logo

Use this full-color lockup on light backgrounds (#FFFFFF or #F5F5F5).

[INSERT PRIMARY LOGO IMAGE HERE]
(Drag and drop your primary full-color logo image file here)

Reversed / Monochrome Logo

Use the all-white or reversed logo on deep backgrounds (Navy #1D2D49 or Teal #569AD0).

[INSERT REVERSED LOGO IMAGE HERE]
(Drag and drop your white/reversed logo image file here)

Clear Space & Minimum Size

Always maintain a protective "exclusion zone" around the logo equal to the height of the brand mark. Do not crowd the logo with typography or other visual elements.

[INSERT CLEAR SPACE DIAGRAM HERE]
(Drag and drop your logo clear space diagram here)

2. Color Palette

Our colors reflect trust, professionalism, and warmth. The palette is strictly defined to ensure consistency across digital and print mediums.

Primary Brand Colors

Color	Hex	Usage
Brand Teal	#569AD0	Primary brand accent. Use for structural UI elements, illustrations, and highlighting key information.
Brand Navy	#1D2D49	Deep anchoring color. Use for primary text, deep backgrounds,

Color	Hex	Usage
		footers, and high-contrast structural blocks.
Brand Gold	#E6A726	Action color. Strictly reserved for primary Call-to-Action (CTA) buttons, icons, and urgent interactive elements.

Secondary / Neutral Colors

Color	Hex	Usage
Pure White	#FFFFFF	Primary background color. Use for standard page backgrounds, cards, and negative space.
Light Gray	#F5F5F5	Secondary background color. Use for section demarcations, subtle hover states, and alternating backgrounds.

3. Typography (English)

The official English typeface for Humara Pakistan is **Univers LT Pro**. It is used universally across all digital assets for both headings and body copy to create a unified, modern, and highly legible aesthetic.

Font Family

Univers LT Pro

Approved Weights

We utilize four specific weights to establish a clear visual hierarchy:

- **45 Light:** Use for large, elegant display text or subtle metadata.
- **55 Roman (Normal):** Use for all standard paragraph and body copy.
- **65 Bold:** Use for subheadings, buttons, and emphasized inline text.
- **75 Black (Extrabold):** Use for primary H1/H2 section headers and massive impact stats.

Typographic Hierarchy Example

- **H1 (Display):** Univers LT Pro 75 Black, 56px, Leading 1.1
- **H2 (Section):** Univers LT Pro 75 Black, 42px, Leading 1.2
- **H3 (Card):** Univers LT Pro 65 Bold, 24px, Leading 1.3

- **Body:** Univers LT Pro 55 Roman, 16px, Leading 1.6
-

4. Typography (Urdu RTL)

To maintain our bilingual integrity, the platform dynamically switches to proper Right-To-Left (RTL) rendering for Urdu.

Font Family

Noto Naskh Arabic (or your designated Urdu brand font).

Bilingual Rules

- When the application is switched to Urdu, the font stack completely overrides Univers LT Pro to ensure perfect Nastaliq/Naskh legibility.
 - Text alignment automatically mirrors (Left-aligned English becomes Right-aligned Urdu).
 - Numeric figures must utilize Eastern Arabic / Urdu numerals (e.g., 10 becomes ۱۰) using the `toUrduNumerals` utility.
-

5. UI Elements & Buttons

Buttons are the primary method of interaction and must be instantly recognizable.

Primary Button

- **Color:** Brand Gold (#E6A726)
- **Text:** Brand Navy (#1D2D49)
- **Font:** Univers LT Pro 65 Bold
- **Usage:** "Donate Now", "Submit", "Complete Payment". There should only be one primary button per viewport.

Secondary Button

- **Color:** Transparent background with Brand Teal border (#569AD0)
- **Text:** Brand Teal (#569AD0)
- **Font:** Univers LT Pro 65 Bold
- **Usage:** "Browse Causes", "Learn More", secondary navigation.

[!IMPORTANT] Never use default Tailwind colors (like blue-500 or red-500) for UI elements. If an error state is needed, please define a specific brand-approved error color.
